

STRATEGIC REPORT: DAY 3 - GEOSPATIAL INTELLIGENCE

Project: 2026 Electoral Analysis
Status: Completed (Visualization Phase)

1. Executive Summary

Day 3 focused on transforming categorized data into actionable geographic intelligence. By mapping the 156 "Battleground Counties," we identified specific **Geospatial Clusters** where the election will be won or lost. The data shows that electoral volatility is not random but geographically anchored in key regional hubs.

2. Key Visual Insights

- The Upper Midwest Hub:** Minnesota (11 counties) and Wisconsin (9 counties) emerge as the primary strategic corridor. Their high density of swing counties indicates a shared regional sensitivity to current economic indicators.
- Southern Volatility:** The emergence of 9 critical counties in Texas highlights a significant shift in suburban/urban margins, offering a strategic opening in traditionally non-competitive zones.

State	Swing Counties	Strategic Priority
Minnesota	11	Critical / High

State	Swing Counties	Strategic Priority
Wisconsin	9	Critical / High
Texas	9	Emerging
Mississippi	8	Targeted
North Carolina	8	Consolidated

3. Strategic Recommendation

Transition to a **"Cluster-First" Deployment Model**. Marketing and operational budgets should be geo-fenced around the identified high-density clusters in the North and the South to maximize "Impact per Dollar".

Strategic Portfolio Day 3: Battleground Clusters
